## DETAILED ACTION

### *Drawings*

1. The drawings were received on March 22, 2007. These drawings are accepted by the Examiner.

### *Allowable Subject Matter*

2. Claims 1-10 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter:  

U.S. Patent No. 4,883,087 to Nielsen in view of U.S Patent No. 5,056,554 to White are references closest to the claimed invention. Nielsen in combination with White disclose a method of executing a leak control system (1) comprising at least one stop valve (2) with an associated flow meter (3) arranged in the supply pipe (4) of the pipe installation, and at least one stop valve (5) with an associated flow meter (6) arranged in the return pipe (7) of the pipe installation, said stop valves (2, 5) as well as associated flow meters (3, 6) being connected to a control box (8), characterized in that the control box comprises at least one valve monitor (9) connected to each stop valve (2, 5) to control/record the possible state of the individual stop valve (2, 5): open or closed. However, Nielsen in combination with White do not teach an executer which is started by the control logics of the control box in consideration of the operating conditions of the pipe installation, and which performs a given sequence of actions during which it controls/monitors the valve monitors (9), which leak control system (1), on the basis of start and execution of the sequence of actions, performs a number of measurements and data collections on the basis of which it subsequently evaluates the functionality of the stop valves (2,
